UPMC
Anhedonia Study

Study Updates!

We are still recruiting children ages 13-19 with a parent or sibling who has depression, bipolar disorder, or schizophrenia. Feel free to pass this Newsletter along to your friends!

We are recruiting for 4 studies in the ANDP lab! Click here to access our website to find info on our lab and our studies! – http://andp.pitt.edu

What We Know So Far...

We’re making great progress, with 190 people in the study so far. We are seeing brain reward regions are activated more when winning money than when there is no reward or loss.

Next Steps for your participation!

July and August Year 2 visits are now being scheduled! If you came in last July or August, look out for a phone call to get your Year 2 visit scheduled.

Please call or text us at 412-589-9013 if you are not sure when your next appointment is or with any questions!

Thank you for your continued participation!

Mental Health Research:

Our lab’s own Emily Flynn presented & won Best Poster Presentation at Pitt’s Dept. of Psychiatry Research Day! See her results below!

In 116 females, brain response to anticipating a reward affected the association between depression & dieting. Depression at age 10 and dieting at age 16 were correlated.

Results suggest childhood depression may be a risk factor for teen eating disorder behaviors, and that individual differences in sensitivity of self-processing could have relevance to vulnerability to eating disorders.
